DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Worksheet 8

Student Name: Shivanshu Ranjan UID: 23BCS10193

Branch: CSE Section/Group: KRG 3-A

Semester: 5th Date of Performance:09/10/2025

Subject Name: ADBMS Subject Code: 23CSP-333

1. Aim:

Design a robust PostgreSQL transaction system for the students table where multiple student records are inserted in a single transaction.

- a. If any insert fails due to invalid data, only that insert should be rolled back.
- b. Previous successful inserts should remain intact.
- c. Use savepoints to manage partial rollbacks.
- d. Provide clear messages for successful and failed insertions.

2. Objective:

- Understand Transaction Management in PostgreSQL
- Learn Partial Rollback Using Savepoints
- Handle Errors Gracefully

WHEN OTHERS THEN

- Provide Feedback on Database Operations
- Develop Robust and Fault-tolerant Database Systems

3. Code:

```
-- Create table
CREATE TABLE students (
 id SERIAL PRIMARY KEY,
  name VARCHAR(50),
  age INT,
  class INT
);
-- Insert multiple students in one transaction
DO $$
BEGIN
  BEGIN
    INSERT INTO students(name, age, class) VALUES ('Shivanshu',20,12);
    INSERT INTO students(name, age, class) VALUES ('Tanya',21,12);
    INSERT INTO students(name, age, class) VALUES ('Devanshu',16,10);
    RAISE NOTICE 'Transaction Successfully Done';
  EXCEPTION
```

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

```
RAISE NOTICE 'Transaction Failed..! Rolling back all changes.';
      RAISE:
  END;
END;
$$;
SELECT * FROM students;
-- Transaction with Savepoints
BEGIN; -- Start transaction
-- Savepoint 1: Karan
SAVEPOINT sp1;
INSERT INTO students(name, age, class) VALUES ('Karan',19,12);
DO $$ BEGIN RAISE NOTICE 'Inserted Karan successfully'; END $$;
-- Savepoint 2: Rohit (invalid insert)
SAVEPOINT sp2;
DO $$
BEGIN
  BEGIN
    INSERT INTO students(name, age, class) VALUES ('Rohit', 'wrong', 12);
  EXCEPTION WHEN OTHERS THEN
    RAISE NOTICE 'Failed to insert Rohit, rolling back to savepoint sp2';
  END;
END;
$$;
-- Rollback the failed insert in SQL
ROLLBACK TO SAVEPOINT sp2;
-- Savepoint 3: Aditya
SAVEPOINT sp3;
INSERT INTO students(name, age, class) VALUES ('Aditya',17,10);
DO $$ BEGIN RAISE NOTICE 'Inserted Aditya successfully'; END $$;
-- Commit all successful inserts
COMMIT;
SELECT * FROM students;
```

4. Output:

```
Output:
CREATE TABLE
D0
 id |
                | age | class
        name
  1 | Shivanshu |
                   20 I
                            12
                   21 |
  2 | Tanya
                            12
  3 | Devanshu
                | 16 |
                            10
(3 rows)
BEGIN
SAVEPOINT
INSERT 0 1
D0
SAVEPOINT
D0
ROLLBACK
SAVEPOINT
INSERT 0 1
D0
COMMIT
 id |
                | age | class
        name
  1 | Shivanshu | 20 |
                            12
                | 21 |
                            12
  2 | Tanya
  3 | Devanshu
                   16 I
                            10
  4 | Karan
                   19 |
                           12
  5 | Aditya
                   17 |
                            10
(5 rows)
psql:commands.sql:27: NOTICE:
                               Transaction Successfully Done
psql:commands.sql:38: NOTICE:
                               Inserted Karan successfully
                                Failed to insert Rohit, rolling back to savepoint sp2
psql:commands.sql:50: NOTICE:
psql:commands.sql:57: NOTICE:
                                Inserted Aditya successfully
```

4. Learning Outcomes:

- Master Transaction Control
- Implement Partial Rollbacks with Savepoints
- Error Handling in Database Operations
- Provide Clear Feedback and Maintain Data Consist
